Author Index

Aspenberg, P.	Arch-shaped versus flat arthrodesis of the ankle joint: strength measurements using synthetic cancellous bone	43–49
Auger, D. D.	Investigation of wear of knee prostheses in a new displacement/force-controlled simulator	51–61
Affatato, A.	Surface characterization and debris analysis of ceramics pairings after ten million cycles on a hip joint simulator	419–424
Baker, R.	The influence of shape and sliding distance of femoral head movement loci on wear of acetabular cups in total hip arthroplasty	393–402
Baker, A. S.	Mechanical testing of the wire clamping characteristics of the Fixclip™ internal fixation system	347–351
Barbenel, J. C.	A new capillary viscometer for small samples of whole blood	385–392
Barnett, P.	Investigation of wear of knee prostheses in a new displacement/force-controlled simulator	51–61
Barton, D. C.	Comparison of wear, wear debris and functional biological activity of moderately crosslinked and non-crosslinked polyethylenes in hip prostheses	111–122
Batty, D.	Structural design and performance of a rear support walking frame	201–209
Bennett, D.	The influence of shape and sliding distance of femoral head movement loci on wear of acetabular cups in total hip arthroplasty	393–402
Benson, L. C.	Effect of stair descent loading on ultra-high molecular weight polyethylene wear in a force-controlled knee simulator	409–418
Berry, G.	An in vitro study of the reduction in wear of metal-on-metal hip prostheses using surface-engineered femoral heads	219–230
Berry, E.	Flexible tubular replicas of abdominal aortic aneurysms	211–214
Besong, A. A.	Effect of microseparation on contact mechanics in ceramic-on-ceramic hip joint replacements	403–408
Beverland, D. E.	The influence of shape and sliding distance of femoral head movement loci on wear of acetabular cups in total hip arthroplasty	393–402
Bielby, M.	Recovery of distal hole axis in intramedullary nail trajectory planning	323–332
Birkinshaw, C.	Selection of elastomeric materials for compliant-layered total hip arthroplasty	77–83
Blom, A. W.	Subsidence in impaction grafting: the effect of adding a ceramic bone graft extender to bone	265–270
Boland, T.	Effects of the sample preparation temperature on the nanostructure of compression moulded ultrahigh molecular weight polyethylene	123–133
Bolton, J.	An in vitro study of the reduction in wear of metal-on-metal hip prostheses using surface-engineered femoral heads	219–230
Buggy, M. H.	Selection of elastomeric materials for compliant-layered total hip arthroplasty	77–83
Cheah, C. M.	Characterization of microfeatures in selective laser sintered drug delivery devices	369–384
Chetwynd, D. G.	Mechanical testing of the wire clamping characteristics of the Fixclip™ internal fixation system	347–351
Chevalier, J.	Surface characterization and debris analysis of ceramics pairings after ten million cycles on a hip joint simulator	419–424
Chiu, H. Y.	The validity of using a video-based motion analysis system for measuring maximal area of fingertip motion and angular variation	257–263
Chua, L. T.	Prediction of skin burn injury: Part 1: numerical modelling	157–170
Chua, L. T.	Prediction of skin burn injury: Part 2: parametric and sensitivity analysis	171–183
Chua, C. K.	Characterization of microfeatures in selective laser sintered drug delivery devices	369–384
Cole, J. S.	Computational and experimental simulations of the haemodynamics at cuffed arterial bypass graft anastomoses	135–143
Cunningham, J. L.	Subsidence in impaction grafting: the effect of adding a ceramic bone graft extender to bone	265–270
Dalgarno, K. W.	Flexible tubular replicas of abdominal aortic aneurysms	211–214
Davies, C.	An in vitro study of the reduction in wear of metal-on-metal hip prostheses using surface-engineered femoral heads	219–230
De Buck, V.	Medical image based, preformed titanium membranes for bone reconstructions: design study and first clinical evaluation	13–21
DesJardins, J. D.	Effect of stair descent loading on ultra-high molecular weight polyethylene wear in a force-controlled knee simulator	409–418
